Reviews

It is smarter work and not harder making it efficient for nursing care.

CARLYN
CARER

We do our daily records and nappy changes on the cell phone, there is a place on the system for all our needed documentation. We now have more time for our residents and activities we follow on the instructions that the staff nurse and sisters give that makes things work smooth.

LAMEES
STAFF NURSE

The information is easily accessible to the Nursing and Risk Management staff and Management, without any delays. The best thing about IHFM - you can use it anywhere.

JUANITA
RESIDENT MANAGER

IHFM

IHFM (Integrated Healthcare & Facility Management) is a product of Renda Consulting. The software was developed in conjunction with healthcare professionals to address the ever growing need for effective information management in the care sector.

IHFM enables staff to create records quickly and efficiently, while automatically managing who is responsible for what, and letting them know when their input is required. Information is immediately available to the relevant staff and management, which also enables managers and family to communicate effectively, with all the facts on hand.

REPORTING

- Daily OPS Management report showing all key indicators and red flags, etc. accessible via the internet
- Customisable reports for all departments.
